

What is claimed is:

1. A method for debugging in more than one programming language, comprising:
  - providing an interface with a debugging frame for each language; and
  - allowing a user to edit each language in a debugging frame.
2. A method according to claim 1, further comprising:
  - providing the capability to interpret multiple languages within a single source file and allow each of the multiple languages to be displayed in a debugging frame.
3. A method according to claim 1, further comprising:
  - providing the ability to support additional languages.
